CLOUD MANAGEMENT SERVICE

Improve Architecture and Optimise Cloud Transformation Costs

Looking to achieve a successful and secure cloud transformation strategy?
The Satisnet-Next2IT partnership allows you to improve cloud architecture, optimise your transformation, and ensure security controls in the cloud.

Our cloud strategy completely changes the way you consume cloud services. We specialise in not only moving your infrastructure and services to the cloud, also but re-architecting the solutions and services to exploit the advantages of cloud computing to the maximum. Ensuring high availability, comprehensive security, cost saving and access to the very best technology. Moreover, our agnostic and multi-cloud approach means we can provide the very best in scale, cost and capability.

Using infrastructure as code, the Cloud Management Service automates the deployment and management of your cloud services across multiple clouds.

Common Cloud Transformation Problems

Oversized and complex bills
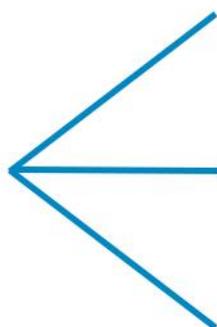

Lack of automation and infrastructure as code

Architecture not designed for cloud computing

Security risks

Unnecessary and poorly designed infrastructure deployed

Lack of cloud understanding

High failure rates (no disaster recovery, backups etc.)

- Health Check Legacy Clouds and Re-Architect ☑
- Security Controls Across Clouds ☑
- Controlled Billing and Cost Control ☑
- Redundant Infrastructure Clean-Up ☑
- Optimised Cloud Design ☑
- Automation and Infrastructure as Code to Maximise Specific Clouds ☑
- Optimised High Availability ☑

Already in the cloud? Our Service will enable you to reduce operational costs, while ensuring security. Instead of the traditional inefficient and high-cost 'lift and shift' strategy which other providers offer, our Cloud Management Service transforms your infrastructure to cloud-native solutions and rebuilds your infrastructure using infrastructure as code!
We aim to reduce *your* cloud infrastructure costs by up to 50%!

The Cloud Management Service – What Are *The* Benefits?

Extension of IT Team

The Cloud Management Service provides an extension of your IT team. Providing co-managed capabilities to maintain control whilst having access to cloud experts that help utilise the cloud to its full potential. We also offer the ability to outsource all your cloud management operations.

Cloud Security

The Service addresses your cloud security head on. Ensuring that cloud services are designed with cloud-first security best practises in mind. Currently, the cloud is often misconfigured introducing huge security risks to organisations. Included in all our Cloud Management Services is monthly security reviews.

Guaranteed Savings

The Service includes our 'Optimisation Service' geared to reducing your cloud costs. This includes resizing infrastructure, removing obsolete services, as well as designing infrastructure using a cost-first architecture.

Infrastructure as Code

The Satisnet-Next2IT Service will optimise the way your infrastructure consumes the cloud. We create code to manage the cloud ensuring your infrastructure is designed to exploit the cloud to its maximum potential. Moreover, our code gallery allows us to build new services in your infrastructure in hours rather than days or months!

Cloud Bills That *Make Sense*

We work with your business to understand how it operates and with this knowledge we design bills that make sense. Our bills provide a breakdown based on cost code, department, and much more.

Clean-Up

We methodically review your cloud landscape to find services that are incorrectly configured or no longer required. This is an ongoing process ensuring that your cloud is always running at its optimum and at the lowest price.

Monthly Report

A monthly report is provided to demonstrate the optimisation and savings made. Moreover, the report details other areas of your cloud infrastructure that can be improved including security and best practices.

The question again: Are *you* looking to achieve a successful and secure cloud transformation strategy?

Then look no further than our **Cloud Management Service** to:

Optimise the utilisation of your cloud infrastructure

Reduce cloud-related operational costs

Improve and ensure cloud security

Basically...get more bang for your buck!
